Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Call surface glycoprotein CD11a precursor - human
NyAlternate names: leukocyte adhesion glycoprotein LFA-1 alpha chain; leukocyte function
C;Species: SerFeb-1990 #sequence revision 28-Feb-1990 #text_change 09-Jul-2004
C;Accession: S03308; A47458; A4755; A48759; S36044
R;Larson, R.S.; Corbi, Al.; Berman, L.; Springer, T.
J. Cell Biol. 108, 703-712, 1989
A;Title: Primary structure of the leukocyte function associated molecule-1 alpha subunit:
A;Reference number: S03308; MUID:89139587; PMID:2537322
A;Reference under: S03308; MUID:89139587; PMID:2537322
A;Rolccule type: mRNA
A;Residues: 1-1170 < LAR>
A;Cross-references: UNIPROT:P20701; UNIPROT:Q9UBC8; EMBL:Y00796; NID:g31421; PIDN:CAA687;
A;Note: part of this sequence was confirmed by protein sequencing

VIA-2 protein homolog - mouse
C;Species: Mus musculus (house mouse)
C;Becies: Mus musculus (house mouse)
C;Date: 13-Jan-1995 #sequence_revision 13-Jan-1995 #text_change 09-Jul-2004
C;Accession: S44142
R;Bedlama, J.M.; Chan, B.M.; Unival, S.; Onodera, H.; Wang, D.Z.; Damjanovich, L.; Latzers submitted to the EMBL Data Library, January 1994
A;Description: The mouse VLA-2 homologue supports collagen and laminin adhesion but not v
A;Reference number: S44142
A;Reference number: S44142
A;Reference repe: mRNA
A;Residues: 1-1178 <EDB-

The FUNCTION: Integrin alpha-M/beta-2 is implicated in various as well as in mediating the uptake of complement-coated particles.

It is identical with CR-3, the receptor for the iC3b fragment of the third complement component. It probably recognizes the R-G-D peptide in G3b. Integrin alpha-M/beta-2 is also a receptor for fibrinogen gamma chain.

C -1 SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-M associates with beta-2.

SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-M associates with beta-2.

TISSUB SPECIFICITY: Predominantly expressed in monocytes and

**Isequence homology of the LRA-1 is implicated in various adhesive interactions of monocytes, macrophages and granulocytes adhesive interactions of monocytes, macrophages and granulocytes and mast cell development and in immune complexemediated for the third complement and in immune complexemediated complexement and in immune complexemediated glomerulonephritis. Mice expressing a null mutation of the alpha-M subunit gene demonstrate increase in neutrophila accumulation, in response to a impaired degranulation and phagocytosis, events that constrains apparently accelerate apoptosis in neutrophils. These mice develop
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright. Integrins with I-domains do not undergo protease cleavage.
-1- SIMILARITY: Belongs to the integrin alpha chain family.
-1- SIMILARITY: Contains 7 FG-GAP repeats.
-1- SIMILARITY: Contains 1 VWFA domain.

DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.

SIMILARITY: Belongs to the integrin alpha chain family.

SIMILARITY: Contains 7 FG-GAP repeats.

SIMILARITY: Contains 1 VWFA domain.
                                                                                                                                                                                                                                                                                                                                                                                                   [2]

Submitted (DEC-1999) to the EMBL/GenBank/DDBJ databases.
I Submitted (DEC-1999) to the EMBL/GenBank/DDBJ databases.
I recognizes the sequence G-P-R in fibrinogen. It mediates cell-cell interaction during inflammatory responses. It is especially important in monocyte adhesion and chemotaxis (By similarity).

-!- SUBLNIT: Heterodimer of an alpha and a beta subunit. Alpha-X associates with beta-2 (By similarity).

-!- SUBCELLUIAR LOCATION: Type I membrane protein (By similarity).

-!- DOMAIN: The integrin 1-domain (insert) is a VWFA domain. Integrins with 1-domains do not undergo protease cleavage.

-!- SIMILARITY: Contains 7 FG-GAPP repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This SWISS-PROT entry is copyright. Gene 325:97-101(2004).

-1- FUNCTION: Integrin alpha-L/beta-2 is a receptor for ICAM1, ICAM2, ICAM3 and ICAM4. It is involved in a variety of immune phenomena including leukocyte-endothalial cell interaction, cytotoxic T-cell mediated killing, and antibody dependent killing by granulocytes and monocytes (By similarity).

-1- SUBMIT: Heterodimer of an alpha and a beta subunit. Alpha-L associates with beta-2 (By similarity).

-1- SUBCELLUIAR LOCATION: Type I membrane protein (By similarity).

-1- DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.

-1- SIMILARITY: Contains 7 FG-GAP repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This SWISS-PROT entry is copyright. Cottens I domain.";

T Structural basis for LFA-1 inhibition upon lovastatin binding to the Cottens Integrin alpha-L/beta-2 is a receptor for ICAM1, ICAM2, ICAM3 and ICAM4. It is involved in a variety of immune phenomena including leukocyte-endothelial cell interaction, cytotoxic T-cell mediated killing, and antibody dependent killing by granulocytes and monocytes.

C-1- SUBUNIT. Heterodiner of an alpha and a beta subunit. Alpha-L

TISSUB SPECIFICITY: Leukcoytes.
DOWAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.
SIMILARITY: Belongs to the integrin alpha chain family.
SIMILARITY: Contains 7 FG-GAP repeats.
SIMILARITY: Contains 1 VWFA domain.

Submitted (SEP-2003) to the EMBL/Genbank/DDBJ databases.

-1- SUBCELLUIAR LOCATION: Type I membrane protein (By similarity).

-1- SIMILARITY: Belongs to the integrin alpha chain family.

SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-L
associates with beta-2.
SUBCELULIAR LOCATION: Type I membrane protein.

TISSUE SPECIFICIATY: Leukocytes.
DOMAIN: The integrin I domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.
SIMILARITY: Belongs to the integrin alpha chain family.
SIMILARITY: Contains 7 FG-GAP repeats.
SIMILARITY: Contains 1 VWFA domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-MAR-1992 (Rel. 21, Last sequence update)

Screening assay for modulators of integrin binding - using immobilised or labelled alpha-d polypeptide, useful for, e.g. treating type-I diabetes.

Example 5; Fig 1A-D; 106pp; English.

This sequence represents a human beta-integrin CD11b subunit which is used to describe a method for identifying compounds that modulate the interaction of the beta-integrin alpha-d subunit with a binding partner of alpha-d which involves contacting an alpha-d polypeptide with an alpha-d binding partner, one of which is immobilised and the other of which is labelled, in the presence of a test compound, and determining if the compound affects binding between the alpha-d polypeptide and alpha-d binding partner, where the alpha-d polypeptide is alpha-d or its fragment comprising the cytoplasmic, transmembrane or extracellular domain of alpha-d. Compounds that modulate alpha-d binding could be used to treat

```
Integrins are a class of membrane-associated molecules that participate in cellular adhesion. Integrins are made up of an alpha subunit and a beta subunit. One class of human integrins are restricted to expression in white blood cells and have a common beta2 subunit: the leukocyte have an important role in immune and inflammatory responses. The present protein sequence is the human integrin alpha subunit CD11b. This sequence was used in an alignment to identify a novel beta2 integrin alpha subunit alpha (AAA60014 and AAB07359). The present sequence has approximately 604 identity to the protein sequence of alpha d. The Alpha den and protein may be useful in therapy for diseases linked to aberrant alpha d function e.g. Type I diabetes, atherosclerosis, multiple sclerosis, asthma, psoriasis, lung inflammation, acute respiratory distress syndrome, rheumatold arthritis and leukocyte adhesion deficiency (LAD). In addition, anti-alpha_d monoclonal antibodies may be used in the
                                                                                                                                                   1081
                                                                                              1021

This invention relates to a modified integrin-I or integrin I-like domain polypeptide comprising at least one disulfide bond so that the domain is stabilised in a desired conformation. The polypeptide of the invention may have antiinflammatory or imunosuppressive activities. The polypeptides of the invention have an open conformation and are useful a polypeptides of the invention have an open conformation and are useful a mununogens to produce antibodies that selectively bind to integrin I-domain; and for identifying a modulator of integrin activity, or of interaction of an integrin and a cognate ligand. The polypeptide of the invention, or antibodies (preferably anti-LFA-1 antibody) is useful for treating or preventing an integrin mediated disorder which is an inflammatory or autoimmune disorder in a subject and for inhibiting the binding of an integrin to a cognate ligand such as Crohn's disease,
